With the growth of the Internet and increased use of mobile devices, it has become more common for many CAD operators to use portable and sometimes low-powered devices to perform CAD work. For example, AutoCAD has been used by people who use external graphics tablets, such as the Cintiq by Wacom, to draw and edit the drawings in their CAD application. In fact, many hobbyists use a pen and stylus to design various CAD models on a small touch display. 1.3.7.1

## What's New In?

Markups and comments in AutoCAD 2023 are intelligent, which means they can use data gathered in earlier drawings to inform the most appropriate actions and changes to your design. In addition to marking and commenting line and block content in your drawings, 2023 also adds the ability to import and incorporate markup from Word, Excel, and PowerPoint documents into AutoCAD. Importing comments from a Word, Excel, or PowerPoint document is a great way to add comments, instructions, and other information to your drawings. You can send comments to your coworkers and team members, for review before you start working on the drawing, or you can send comments to yourself so you can later look back and refer to them.
