What's New in the FortiClient?

Based on FortiClient technology, FortiClient VPN Server is a licensed FortiClient product that lets you implement a public VPN solution for your organization's employees, workgroups, and corporate network. It provides secure and private connectivity for your endpoints and provides several additional management features, including VPN connectivity and Virtual desktop infrastructure (VDI). Installation: You can install and manage VPN servers on Windows Servers or on VDI servers. It supports HTTPS only VPN connections to the same external IP address. It also supports PIA, PPTP, L2TP, and L2F tunneling. Administration: FortiClient VPN Server includes the FortiClient VDI product in one package. It can be installed on the same VDI server as FortiClient VDI Server or on separate VDI servers, to accommodate different number of users. It provides users with a centralized configuration and management of the VPN server. It also provides cross-platform support, including integration with the various MDT and HPE solutions. Additional features: It provides several additional management features, such as AppLocker, firewall, and network monitoring, as well as application restriction and auditing. It also supports a rich configuration feature, which lets you control a lot of configuration aspects. Component: FortiClient VPN Server is a FortiClient product. FortiClient products provide a range of security solutions that can help you control the security of your network and devices, providing a safe and protected environment. Need to share a folder or drive with users that also use Windows 10? You can now accomplish this easily using a feature called "OneDrive for Business". As mentioned in the above video, you can enable this feature with the following steps: 1. Open File Explorer 2. Click on the file or folder you want to share 3. Click on the settings gear and then OneDrive for Business settings 4. Check the Share files/folders 5. Type in the email address of the user you want to share with 6. Click Share 7. Click on the OK button to finalize your settings Windows 10 OneDrive for Business allows you to share a folder or drive with users that also use Windows 10. Using this feature, they can access your files from the cloud and also have their own copies of your data. The files are stored on the cloud using "OneDrive" and are accessible from anywhere. This feature does not require a domain or a connection to a server. In Windows 10, OneDrive for Business is available on PCs, Mac, Android, and iOS devices. Windows 10 OneDrive for Business is the ideal choice for businesses that need to share a folder or drive with users that use Windows 10, but also want to maintain a separate set of data. This feature is also ideal for mobile devices, as it enables users to access all their files from anywhere.

Windows 10 Mobile already
