What's New in the?

This is the portable version of
NexusFont - a program that
enables you to view and manage
all installed fonts on your
computer. Since installation is not
required, you can store NexusFont

on a USB flash drive or any other removable device, save it to any computer and directly run its executable file. More importantly, items are not left behind when you remove the program, such as files or registry entries. NexusFont truly focuses on the interface, as it offers an intuitive and eye-catching layout, making it easy even for inexperienced users to navigate. So, you can view a list of all currently installed fonts, along with the default text sample. The app supports the creation of font

sets, allowing you to easily create a collection of your favorite styles. It is also possible to add tags to them, thus increasing accessibility. Furthermore, you can view a map of all characters found in a particular font type and either copy or export them to images (PNG, GIF, JPG, JPEG, BMP). Uninstalling fonts is done through three simple options - uninstall and delete font files, leave files where they are, or uninstall and backup font files. Layout customization features of NexusFont revolve

around the font color, size and emphasis mode, anti-aliasing, background color, sorting mode, subfolders and UI language. Additionally, you can locate duplicate fonts, save current settings for further use and minimize the app to the system tray. The piece of software uses a moderate amount of system resources, has a good response time and includes user documentation. No errors have occurred during our tests and NexusFont did not freeze or crash.

All in all, the app provides some excellent features for viewing and managing fonts on your computer, while drawing attention to the user-friendly and attractive interface.
