AutoCAD Mobile was released in March 2009, and AutoCAD Web app in November 2008. At the time of their release, these apps were the first ever CAD apps to be developed using Adobe Flash technology. AutoCAD Mobile was an early entry in the smartphone industry, before Apple's iPhone was released in July 2007, with BlackBerry, Android and Windows Mobile devices following later. Since then, smartphone app adoption has grown rapidly, with an estimated half of the world's population now using a mobile phone. The AutoCAD Web and Mobile apps are the company's primary mobile apps, accounting for well over half of the company's total mobile business. In 2013, Autodesk acquired Dimension 3D, the maker of Dimension Ease software, giving AutoCAD Web and Mobile a dimensioning component as well as a more contemporary user interface. In April 2015, Autodesk released a mobile app for Google's Android operating system. Although AutoCAD itself is not a smartphone app, with its near-universal acceptance among CAD users, it's the natural progression for Autodesk to develop a smartphone app, as some of its customers have started to demand one. A CAD app helps to keep the user's information securely on their phone, and keep the user within the Autodesk ecosystem. According to Autodesk, AutoCAD and AutoCAD LT apps account for close to 30 percent of the company's mobile revenues. According to IDC, in 2015 CAD software sales on smartphones and tablets totaled \$1.4 billion, double the \$667.3 million sold in 2013. By the end of 2016, IDC expected CAD software sales to double to \$2.9 billion. AutoCAD currently has over 11 million users, nearly half of whom are estimated to use it in mobile form. AutoCAD Mobile was featured in the UK's Sunday Times newspaper in October 2012, when users in the UK and United States were able to play a version of Angry Birds on their mobile devices using AutoCAD's user interface. The technology impressed the newspaper's readers, and Autodesk CEO Carl Bass indicated the move as the beginning of the industry's transition into mobile. The AutoCAD app for the iPhone was released in March 2009 by Steve Jobs and Steve Wozniak at MacWorld 2009, under the name Mobile CAD. Originally, the app was a free download from the Apple App Store.

Plot After an unsuccessful attempt to commit suicide, a Princeton graduate, Robert Driscoll (Jason Robards) returns to his hometown to attend his brother's funeral. While his other brother, Driscoll's namesake, is a successful businessman, Robert Driscoll works for the mill. His first day at the mill is marked by his first argument with his new supervisor, a merciless boss named Marty Bronson (Henry Fonda). Robert enters the building knowing that he is in trouble with his supervisor and his brother, his high school sweetheart, Hilda (Dorothy McGuire), and his parents, but the warm welcome he receives from the mill's supervisor and his wife, along with the fact that there is no sound at the mill, makes him think that his troubles may be over. Robert also begins a relationship with Louise, a young mill worker, and discovers that he is attracted to her. However, after a confrontation with Marty, he admits to his brother, and his former girlfriend, that he has failed to do anything about his problems. Shortly afterward, Robert is murdered while on a picnic, and the murder is ascribed to a deranged, insane man who has been in the mill for a few years and who one day began to shout "I want money" before strangling a visiting senior faculty member, Dr. Kellerman. In the end, Robert's brother reveals that a week before his death, Robert was fired from his job. The murderer is arrested and the jury leaves with the belief that it was Robert himself who was trying to commit suicide, and that he was responsible for his brother's death. The play, in which the murderer tells his story, is a1d647c40b
