Horseshoe bats (*Rhinolophus* spp.) are the principal host of the tick vector of bovine babesiosis, *Babesia microti*. These ticks are also known to transmit other tick-borne pathogens, including human pathogens, which could pose a risk to public health. In order to evaluate the risk of transmission of these pathogens to humans, we analysed the 16S rDNA of *Babesia* sp. detected in horseshoe bats in southern France. Forty-seven samples were collected from bats submitted for necropsy for diagnostic purposes and tested for *Babesia* sp. by nested PCR targeting the *B. microti* 18S rDNA. *Babesia* sp. sequences of 398 bp were detected in 26 of the 47 samples (55%). These sequences were submitted to GenBank with the accession number JX984139. *B. microti* sequences were detected only in one of the 26 samples, in which *Babesia* sp. sequences were also detected, leading to the conclusion that a combination of both tests gave a higher detection rate. The identity of the *Babesia* sp. sequences to known *Babesia* spp. was 96.3

EQilibrium offers a variety of effects. Effects include EQ, Normalization, Amplitude Envelope (A.E.), Decay, Time Stretching, Pitch Shifting, Flanger, Chorus and Reverb. EQ: EQ (equilibrium) is a traditional EQ with a center frequency that can be manually or automatically adjusted, as well as two Bandwidth controls. Amplitude Envelope (A.E.): A.E. generates a low-frequency envelope that can be applied to the audio signal. Decay: The plugin applies a delay to the input. The delay time can be set in milliseconds or frames and is monotonically increasing. Time Stretching: Time Stretching introduces an inaudible phase distortion to a stereo or mono signal. Pitch Shift: Pitch shifting adjusts the pitch of a source signal. Flanger: The plugin provides a clock signal that is modulated at a frequency that can be set in the Flanger page of the plugin menu. Chorus: Chorus distorts an audio signal by applying a variety of synthetic resonances. Reverb: Reverb is a plugin that implements a resonant chamber (plate reverb) and a reverberation tail. Features: EQilibrium supports a wide range of bands, including Peak, LPF, High Shelf and Notch. EQilibrium can analyze audio with or without audio monitoring. EQilibrium can analyze audio with or without the use of a multi-tap FIR filter. Slicing is supported as well. Slicing provides the ability to export a selected region of the plugin's sound to a file or to a VST/AU/RTAS compliant instrument. EQilibrium supports a variety of sources, including the following: ■ Audio files (WAV, MP3, AIF, etc.) ■ Sound clips (loop samples, sound effects, etc.) ■ Streams (sound card output, internal audio, etc.) ■ Audio monitors (external audio source) ■ MIDI (sequencer, etc.) The plugin allows for the customization of a number of parameters. ■ Available parameters include: ■ Center Frequency ■ Cutoff Frequency ■ Q ■ Gain ■ Bandwidth ■ Threshold ■ Spread ■ Depth ■ EQ Band 1 ■ EQ Band 2 EQilibrium features a
