Field of the Invention The present invention relates to a multilayer molding molding device comprising a molding case having a cavity which is partitioned by a molding core and is filled with resin, and a molding core fixed in the molding case and defining a molding core surface opposing the molding core. The present invention also relates to a process for producing the multilayer molding molding device. 2. Description of the Related Art One example of conventional multilayer molding molding devices is a multilayer molding molding device disclosed in Japanese Laid-Open Patent Publication No. 11-115276. The disclosed multilayer molding molding device has a molding case, a molding core, and a base. The molding core is disposed in the molding case. The molding core is cylindrical and is configured to be capable of changing its outer and inner diameters. The molding core is rotatably held by a gear coupled to a base. The gear is movable in an axial direction. The molding core is axially movable between a first position in which the outer diameter of the molding core is small and the inner diameter of the molding core is large and a second position in which the outer diameter of the molding core is large and the inner diameter of the molding core is small. The outer diameter of the molding core is reduced when the
