Clay minerals and cements are subject to contact-induced weathering processes that have important implications for the evolution of landscapes and the biogeochemical cycling of elements. In this study we investigated the influence of the geological setting on the nature of clay and cement weathering products. Cement weathering products from three contrasting geologies, parent rocks, and soils were characterized using scanning electron microscopy coupled with energy dispersive X-ray spectroscopy, atomic absorption spectroscopy, X-ray diffraction, and Mössbauer spectroscopy. We found that cement weathering products from the geologies examined in this study were quite distinct from each other and from the cement weathering products that formed in the parent rocks. Cement weathering products from the soils, however, were similar to those formed in the parent rocks, likely because of the heterogeneity of the soils and the reduced effective reaction rates that resulted from the high pH of the waters used to fill the pore spaces. There are clear differences in the nature of cement weathering products between settings that have implications for their biogeochemical cycling.Q: How can I use the Group By statement of PIVOT to get the result in different rows? I need to be able to know if the user is logged in or not. I need to do this because I am creating a program where I can login through the GUI. If they are not logged in they will have to use the username and password that I will provide. Thanks A: If you are using ASP.NET, you can easily check it. In the Page_Load event you can check the Session.SessionId, and if this is an empty string, the user is not logged in.

Tuesday, November 2, 2009 What can I do for you? When an adult asks me to teach their children, I always have to stop and think. So first of all, what can I do for them? What can I bring to their home to make it a better place? What experiences have I had that can benefit them? To me, that is where I see my role. First and foremost, I teach my children to read and write. They can't go to college without these skills. My daughter started on the right path and my son is lagging behind. I know that because he has not yet started writing his name, but his dad and I think that he has some dysgraphia issues. As I work through those skills, I try to help my children as much as I can. My daughter has a desire to learn about life and nature and become a teacher when she grows up. She is going to take my lessons and use them. I also teach her how to live on a tight budget. I teach her how to budget and to help herself save money. I am constantly
