Origin and History The market for CAD programs experienced rapid growth in the 1970s and early 1980s, driven by the proliferation of microcomputers and their increasing performance. The rise of computing coincided with the development of graphic display hardware, which in turn led to the creation of CAD applications. AutoCAD Serial Key started as CADONE, a DOS-based application that would run on the Wang computer. Shortly after its initial release, the application received a number of feature enhancements. The first version of AutoCAD was originally developed by the IBM CAD group, using native programming, which had been previously used to develop the first CAD programs, including Multigraph (1977), Mach3 (1977) and Whitney (1979). The first major revision of AutoCAD was code-named AD-1, and was released in November 1981, providing basic drafting functionality. During 1983 the original IBM developers moved to Corvallis, Oregon, to start up their own company. The new company developed a new C++-based graphics rendering system called Alias. This in turn enabled the developers to release AutoCAD Graphics Workbench (Version 1.0), which added such features as the ability to load and edit external bitmap images. AutoCAD 1.0 was released in November 1983. The new version added a basic layout manager and a complete set of drawing tools, including line, polyline, arc, circle, ellipse, freehand, polygon, sector, spline, text, and two-dimensional views. Other features included the ability to interactively manipulate layers, construct paper sizes, create technical drawings, and export to Adobe PostScript. AutoCAD provided a variety of plug-ins for third-party applications, enabling easy creation of technical drawings and other specialized projects. AutoCAD 1.0 was originally sold as a licensed program, requiring that a user purchase a separate modem and activation code. However, a number of free versions of AutoCAD were also produced, mainly for users of the Corvallis, Oregon, developers. Some of these were distributed free of charge on floppy disks and other diskettes and were known as "circuit papers." Other versions were distributed on the U.S. Defense Advanced Research Projects Agency (DARPA) Bulletin Board System (BBS) in a similar manner. A relatively unknown programmer named Christopher John Taylor created AutoCAD 2.0 for Corvallis, Oregon in 1984
