## AutoCAD Crack

In April 2017, Autodesk announced the release of AutoCAD LT. Autodesk AutoCAD LT is a reduced feature-set version of AutoCAD designed to serve as a first version for the general public and small businesses. Contents show] AutoCAD/Design AutoCAD is a computer-aided drafting and design application. It's used for creating 2D and 3D plans, technical drawings, and production-related documentation. AutoCAD's process begins with drawing a "storyboard" of the drawing area. The storyboard is a graphic representation of the drawing area. This graphic representation is used to orient the user as to the placement of design elements. If the user has trouble finding an object, they can "walk" the storyboard by clicking on the object and moving the mouse. After the storyboard is completed, the user can create actual drawings. Drawings are created in one of two different views, either with layers (2D) or without layers (3D). Layers (2D) A layer is a way to organize a drawing. The layer is similar to the way a folder works on a computer. When a layer is not active, it's just another name for a drawing. When a layer is active, it defines a set of drawings that can be manipulated as a group. For example, you can have a layer named Walls and another layer named Doors. Each layer can have multiple drawings, such as Drawings that is used for walls and Drawings that is used for doors. All drawings in a layer can be viewed by clicking the layer name. When a drawing is highlighted, the object's properties will appear below it. A drawing has a direction and a point of view. A drawing always has a direction. This direction is a default value when the drawing is created. When a drawing is opened, it's created at a specific point of view. This point of view can be changed to another point of view by clicking the point of view icon and selecting the new view. When multiple drawings are opened and an item is selected on one of the drawings, the item will be selected on all of the drawings. When a tool is activated, its focus is placed on the drawing in the current point of view. Clicking on a drawing will bring it into the current view. If a drawing is not in the current view, it can be brought into the current view by clicking

ObjectARX, its successor Eclipse ARX, are also available for Windows, Linux and Mac OS X. Raster converter AutoCAD Crack For Windows for Mac can run Adobe Photoshop 6.0 raster or vector (eps) file formats. Raster files were primarily used for data recovery, digital cartography, and printing, and have been replaced by vector files in recent years. Software development tools Microsoft Visual Studio (since AutoCAD Cracked 2022 Latest Version 2012) Microsoft Expression Blend Document handling A drawing stored in the database may be a hierarchical structure consisting of: AutoCAD Crack Mac DWG or DXF/ABD/PDM (Drawing XML Data) file A document file containing all drawing objects A layer file containing only the objects of a certain category A drawing template file containing sets of objects to create new drawings based on predefined templates (e.g. part of a drawing template contains a simple panel drawing with default lineweights, dimension lines, etc.) A project file with data about the project and the drawing A drawing database with all drawing files and the data of the drawing database A drawing manager running in the background and managing the data Layer file In addition to the drawing template, layers are used to group objects in a drawing. In older versions of AutoCAD, the layer file was a separate file containing data only. In recent versions of AutoCAD, the layer file is an extension of the drawing file and contains data for the objects contained in the drawing as well as additional information (such as the lineweight, hatch, and color of the linework). Drawing manager In older versions of AutoCAD, only the drawing manager stored the data, including the objects in the drawing. Since AutoCAD 2007, the drawing manager is a separate component and resides on a dedicated database server. External drawing tools AutoCAD provides numerous external tools that can be used to view and manipulate drawings. These tools are generally command-line tools and therefore interact with the database directly. External tools are invoked by means of a command script (a batch file) that is set up as a configuration file called Autodesk.lst. A command script may be used to automate multiple tasks. The command script must be written in AutoLISP. Graphical user interface AutoCAD provides a graphical user interface (GUI) for various commands and the data manager. UI and LIS ca3bfb1094

## What's New In AutoCAD?

Bring layers and parts into or out of your drawing. Use either the import or assist tools to instantly add or remove parts, from multilayered drawings. In the video, a text box is created, a part is added to the text box, and the part's drawing is opened. Improvements in the AutoCAD Basic Mesh Tools: A "Hidden" tool, "Unhide", and "Remove Hidden" options have been added to the Mesh Tool command. The AutoCAD Basic Mesh command now supports Mesh Style objects and supports the selection of multiple objects. The mesh style options now include "Hide" and "Remove Hidden" for meshes. In the tool options, a new "Vertex Counter" option lets you choose the number of vertices used for generating a mesh. Refine Shapes: With the new refine tool, you can place a point on a face, in any position, and specify a small radius to generate a new point or vertices. The new "Refine Point" command lets you refine a selected point to generate a new point. You can also use "Refine Edge" to extend or recede selected edges. The "Refine Edge" command has a new "Refine Edge" option that lets you select which faces you want to refine. Face Fill: With the "Fill" command in the Properties toolbar, you can quickly fill any faces of any dimension in your drawing with the color of your choice. You can also customize the fill color by selecting it with the "Fill Color" tool on the command line. With the new "Fill Color" tool in the Properties toolbar, you can apply a fill color to any selected face by clicking once to pick the color.
