The main user interface of AutoCAD Product Key is a two-dimensional (2D) platform known as "paper space" where a user can model and generate 2D drawings and charts, construct technical drawings and wiring diagrams, generate project management drawings, prepare bills of materials, and perform preliminary engineering analysis. The basic elements of paper space are a canvas, or plot area, that can be scaled and stretched to fit the model or drawing area of the user, a viewport, or window on the canvas, and a drawing layer. Pro/Engineer Navigator The Pro/Engineer Navigator (PEN) is a geographic information system (GIS) used for engineering, design, and construction tasks. Its base product was developed by Benjamin Steiner's Pro/Engineer, Inc., which was acquired by Autodesk in 2002. It was subsequently re-branded as MapInfo Professional. Pro/Engineer Navigator uses the familiar windows interface for maps and the navigation data, overlaying it with the engineering information. Mac OS X version The first version of Pro/Engineer Navigator was released on November 2, 2006, under the name Pro/Engineer Navigator Mac OS X. It was developed by Autodesk's Technical Assistance and Support (TAS) department and a team led by Michael Altenwein and Tom Bonic of Pro/Engineer, Inc. Based on the Pro/Engineer Navigator Windows product, it is a native Mac OS X application running under a framework that will also run under Windows. It supports most of the features and functions of the Pro/Engineer Navigator Windows and MapInfo products, and additional functions are provided to help engineers with CAD products such as Autodesk AutoCAD and DGN. Newer versions of Pro/Engineer Navigator Mac OS X come with additional features and plugins from Autodesk such as MARC support for web mapping, a new version of Autodesk Navisworks for use with DGN and DWG files, and an improved version of AutoCAD Map 3D. A number of fixes and improvements were made in the release of Pro/Engineer Navigator Mac OS X 6.1, including a new version of AutoCAD Map 3D. Autodesk Map 3D is a plug-in for Pro/Engineer Navigator Mac OS X that is designed to use the native capabilities of Apple's operating system and will work without any special action on the part of the user. Its purpose is to provide CAD support in the form of a web-based application designed to enhance the use of AutoCAD and other CAD data by the Pro/Engineer Navigator Mac OS X users. Though the map data and functionality available from Autodesk Map 3D is similar to that of the Autodesk Navisworks software, Map 3D does not offer the same degree of functionality. The Map 3D application is designed as a browser-based application and is intended to be used ca3bfb1094
