The original "Sunrise" is a 1902 photo of South Dakota's Big Rapid Mountain taken by New York photographer Eadweard Muybridge. _© Eadweard Muybridge/CORBIS_ # CHAPTER 2 # Eye for Detail When it comes to Photoshop Elements, your job is to use all the tools available to you to create strong images that enhance the story of your subject. Just as we've done in every chapter in this book, we'll introduce some new and exciting new ways to use and manipulate images. At this point, we're back to basics. You probably have an understanding of the basics of image editing and know how to quickly change a color, crop an image, adjust overall image brightness and contrast, or even add a whole new photo to a previous image. We'll be taking all of those well-known elements of image editing and examining them through a new lens in this chapter. In this chapter, we'll start with a look at some basic editing options, including histograms, in the context of one image editing technique: dust removal. We'll then demonstrate a very simple but incredibly effective editing technique: adding a glowing background. After some fun with types of image file, we'll turn to one of the main focal points of this book, your camera, in the section "Light and Color." You'll discover how to choose and use different light sources and determine the color of light on a subject. We'll also look at the use of color in images and how to translate that color into color adjustments. # **Histograms: Myths, Fallacies, and Realities** The histogram is one of the most useful editing tools in Photoshop Elements. The histogram is a graph that graphically represents the brightness of the image when it is displayed on your computer. It does this by showing the brightness of the pixels in an image displayed on a computer screen. Figure 2-1 shows a histogram from an image that was saved from a digital camera. You can zoom in on the histogram to view details. **Figure 2-1** Histogram for a digital image. In this section, we'll demystify the histogram and examine some of the myths of histograms.

Like this: This post came out of nowhere, as most good ideas do. Last month I went on a great book excursion with the Neverland Library of Singapore and they brought the largest book collection to a small island. There was a book for everyone and it was a great way to spend an hour. Librarian: "Do you know what this book is about?" Me: "no clue" Librarian: "it's about Disney" Me: "Awesome! What's your favorite Disney movie?" Librarian: "That's a tough question, so many of them" Me: "Wow, we have a lot of Disney books. Do you like them?" Librarian: "I like Disney. I love princesses" Me: "Princesses!!! We have princesses too. Do you like them too?" Librarian: "I do!" Me: "Then you can wear a tiara, you can play dress up, you can read about them, go to a movie and get a princess outfit, get free stuff…" Then I turned to the younger kids. "Do you know what this book is about?" KIDS: No clue… Me: "It's about horses, right?" KIDS: "Yeah." Me: "I have some horses at home…" KIDS: Ohhhh!" Me: "do you know what they do? They can learn about horses and you can see different kinds of horses, horse clothes, or get free toys. You can train them and make them give you hugs and kisses" Then I turned to the teens. "Do you know what this book is about?" TEENS: "No clue." Me: "It's about making sure everyone in the world is happy. You do that by showing kindness. When you have someone you care about, you are kinder to them. You are kinder to the people you live with and to animals. It's good to help others, we all need to help other people". Then I
