Towards a Renaissance in Physics: Essays of M. Nelkon and P. Parker Advanced Level Physics (Nelkon And Parker, Pdf) by Nelkon and Parker. If you have never looked at any of Parkerâ€™s books (yes, I have) then this is a brilliant introduction to the with acid-sensitive and quenched dye or image as described above. In the case of color positive images, it is preferred that the images are

---

developed in the normal manner and the image dye remains in the negative. In the case of color negative images, the image is formed by contacting the surface of the photographic element with a color developer and can thus in most cases be viewed by reflected light. The image can be seen by transmitted light but in some instances it may be more convenient to view it in reflected light. The materials for developing the color images of the present invention are well known to the art, e.g., Research Disclosure, May 1978, Item No. 17029 and U.S. Pat. No. 3,822,128. A preferred color developing system is one in which the oxidized form of the color developing agent formed by reaction of the developing agent with the primary object (or extraneous) silver, is oxidized by a
