With a 70,000,000 rating on the app store, Photoshop Elements is a great investment for photographers. It's not often that you get to see a major photo editing app get a \$1-million Series B funding round. But that's exactly what happened today with the iOS photo editing application Photoshop Elements, which is owned by Adobe. Photoshop Elements, which has received seven major updates since it was first released on iOS and Android in 2016, has now been bought for a cool \$120 million in new funding. The round was led by Chinese e-commerce giant JD.com, with participation from Chinese software company Qihoo 360 and existing investors, including Shunwei Capital, Valor Capital, Great Ventures, and several of the company's current and

former employees. According to sources close to the deal, the round is believed to be somewhere in the \$130 million to \$150 million valuation range, and may very well be valued at \$160 million, which could make the company worth nearly \$1 billion. That would place the company in the top 20 mobile photography apps on both iOS and Android, ahead of apps like Pixlr and Snapseed. It also creates one of the most valuable photography apps for mobile in the photo editing space. Photoshop Elements For the uninitiated, Adobe Photoshop is a major, legacy desktop app for professional image editing that's been around since the 1980s. Photoshop Elements is something of a poor man's version of the software, with fewer features, a less confusing user interface and a lower price tag. The software is now for sale on iOS, Android and MacOS. The biggest challenge to Adobe's photo-editing success has been the fact that the majority of professional photographers already rely on things like Lightroom or Photoshop for photo editing. Most users outside of those customer bases haven't seen a reason to buy into the more expensive Photoshop-based software, which is why Adobe built a simpler alternative to Photoshop called Photoshop Elements that is just as good for occasional use. This is not the first time that Adobe has made a play for the image editing market. The company has come out with other popular products in the photo-editing space, including Camera Raw, and a popular web-based photo editing service called Lightroom Classic CC. In fact, today's news represents the second major move by Adobe in the photo 05a79cecff
