the plug-in based approach is used for proprietary applications such as DWG2LISP. DWG2LISP can be used to automate the conversion from.DWG to a LISP script which can be run interactively, saving the user having to recreate the.DWG document each time a change is required. The Visual LISP programming language is a high-level scripting language developed by Dennis Ritchie for the Algol-60

programming language. Visual LISP was originally released by the LISP developers as a project for Emacs-Lisp, the syntax of which closely resembles Visual LISP. However, Visual LISP never gained adoption among LISP programmers and in the late 1980s, Visual LISP was considered to be a dead language. In the early 1990s, Visual LISP was revived and became a new language called AutoLISP. AutoLISP was first released by the AutoCAD developers as an internal development tool to automate the conversion from Autocad's native drawing format to AutoLISP. AutoLISP was released to the public in 1994 and became an open-source project on Sourceforge in 1999. In 2000, Visual LISP was rebranded as "AutoLISP", but was still a separate programming language from the AutoCAD-developed AutoLISP. Visual LISP was originally intended to complement the development of AutoCAD's graphics engine; although this role has since been fulfilled by the introduction of AutoLISP, Visual LISP is still being developed and supported by Autodesk. In 2007 Autodesk introduced DWG2LISP, which is an open-source project that uses the AutoLISP programming language to automate the conversion from.DWG to LISP script. Autocad also offers a free API for AutoLISP that allows for easy, fast, and efficient programming in AutoLISP. This API is different from the API used to develop applications that incorporate the Autocad DWG files. AutoLISP is strongly tied to AutoCAD. The two languages can share information and call on each other. Dynamic Data Exchange (DDE) Autodesk offers an API for Visual LISP, AutoLISP, VBA, and.NET for Dynamic Data Exchange. The Dynamic Data Exchange (DDE) APIs are used to manage the a1d647c40b
