Hi everyone, I am very happy to tell you that I have accepted the position of Visual Basic Developer Evangelist at Microsoft. As part of my position, I will be writing articles for developers using Visual Basic and Microsoft Expression Blend on how they can use these technologies to create and develop Windows Phone 7 applications. I will also be helping various communities such as the Microsoft Visual Basic Experts and the Visual Basic Community on how they can adopt Visual Basic for Windows Phone 7. This will also involve working with other communities who are working on Windows Phone 7 projects using Visual Basic. I will be posting here to communicate with everyone who is interested in developing Windows Phone 7 applications using Visual Basic. I will try and schedule a regular series of articles for you.

Tuesday, September 9, 2011

Hi everyone, I'm continuing with the new theme that we've set for the Visual Basic Developer community. This new theme is called "Visual Basic for Windows Phone" and the logo was created by the cool people over at Design Spark. As of today, we have renamed the last Visual Basic Community Technology Preview to Community Technology Preview 9.

1d6a3396d6

In this first CTP release of Visual Basic for Windows Phone, you will see the Visual Basic.NET classes and features available in Windows Phone 7. You will also learn how to create Windows Phone 7 applications using Visual Basic. This CTP contains two editions of Visual Basic, namely the Visual Basic for Windows 7 and Visual Basic for Windows Phone 7 editions. Both editions support the same set of classes and features in the same way. For example, the example projects in this CTP share the same class libraries and build configuration files. Microsoft Visual Basic is a cross-platform object-oriented programming language, targeted at the Microsoft Windows development platform. It is a development tool that works at the language level, which means that Microsoft Visual Basic is a programming language, as opposed to a compiler or development environment. Microsoft Visual Basic contains the Visual Basic for Applications (VBA) development environment for Microsoft Office programs. VBA was introduced with Microsoft Office 97 and supports an array of programming options for the creation and maintenance of documents, spreadsheets, reports, and database applications. Visual Basic development languages allow programmers to create stand-alone programs or application modules that can be called from Microsoft Office applications. Microsoft Visual Basic is based on the Visual Basic.NET languages, the most recent version of which is Visual Basic.NET 4.0. Microsoft Visual Basic is a language-level programming tool that supports Visual Basic.NET and provides a basic development experience for developing application modules, components, and complete solutions. Microsoft Windows Phone 7 and Windows Phone Silverlight are development platforms that use Microsoft Visual Basic as a programming language. They provide APIs to allow developers to create application modules, components, and complete applications using Microsoft Visual Basic. From Visual Basic Microsoft Visual Basic is a cross-platform programming language and development environment for Microsoft Windows. In order to run Visual Basic, you need a version of the Visual Basic for Applications (VBA) editor. Also required is a version of Microsoft Office to run Visual Basic. The following versions are supported by Visual Basic: Microsoft Office 2005 and above Microsoft Office 2007 and above Microsoft Office 2010 and above Microsoft Office 2013 and above Microsoft Office 2016 and above Versions of Visual Basic prior to 2005 cannot run on Windows Phone 7 and the Windows Phone Silverlight development platform. Microsoft Visual Basic for Applications is not supported in Visual Basic for Windows Phone.844 F.2d 791

What's New in the Visual Basic For Windows Phone Developer Tools?

This is the Visual Basic for Windows Phone Developer Tools package. It includes the following components: Prerequisites: You must have Visual Studio 2010 and Silverlight 5 installed on your machine. The Visual Basic Windows Phone package that you are currently using must be installed on the same machine that is installing the Visual Basic Windows Phone Developer Tools package. This package includes the Visual Basic Windows Phone development templates. In Visual Studio, after installing the Visual Basic Windows Phone Developer Tools package, install the following: Note The Visual Basic Windows Phone Developer Tools package is a community technology preview (CTP). This CTP is to be used as an evaluation, and is not intended to reflect the final version of the technology, which is subject to implementation changes. If you do not install the CTP, you will not be able to use any of the templates, and you will be unable to view any output. The package includes a command-line (CLI) reference for each template, allowing you to explore the functionality of the templates. If you do install the CTP, the CLI reference is located in the CTP folder, in the Windows\WPVDPackageReference folder. Development Environment: All Visual Basic projects created in this CTP will use the "Blend for Windows Phone" development environment, and the "Silverlight" template. The Blend for Windows Phone environment requires that you have Visual Studio 2010 installed on your machine. Navigate to your projects folder. Open VS2010\Solution.sln Open the following folders under the solution. Windows\WPVDPackageReference\WPVDPackageReference\bin\WPVDPackageReference\WP7 Open the following folders under the solution. Windows\WPVDPackageReference\WPVDPackageReference\bin\WPVDPackageReference\WPVDPackageReference. VisualBasic You should now have a full copy of Visual Studio 2010 (10.0.40219.1) and Blend for Windows Phone installed on your machine. If you installed VS2010 using the Complete Installation, you should also have the Windows Phone 7 SDK (KB894033) installed on your machine. These are the command-line references for the Visual Basic Windows Phone templates. For more information, see Getting Started with the Visual Basic Windows Phone Developer Tools on Windows Phone. Note Microsoft Visual Studio 2010 Professional, Premium, Professional for Windows Phone, or Ultimate, is required to use this CTP. Prerequisites: You must have Visual Studio 2010 and Silverlight 5 installed on your machine. The Visual Basic Windows Phone package that you are currently using must be installed on the same machine that is installing the Visual Basic Windows Phone Developer Tools package. This package includes the Visual Basic Windows Phone development templates.

System Requirements:

Windows: Mac: Linux: About the game: A new team of thieves steal old technology and riches. Help to find them, and get a share. They must be arrested! The game has a simple interface and the gameplay is easy to control. Use the mouse to jump, shoot, collect objects, jump and interact with the environment, find new paths and solve puzzles. Collect money, buy more weapons and have fun! Locations: New locations will be added and updated regularly
